

IS CouponScript v2.0

Installation Instructions

1. Unzip the contents of the ISCouponScript2.zip folder, and upload it to your server in your websites root.
2. Create a MySQL Database, cPanel users can do that via MySQL Database Wizard.
3. Make sure you granted all privileges to the database user, while creating the Database.
4. Access the install directory by visiting, yoursitename.com/install/.
5. Fill the Database Details and Hit Submit. Fill the Database Details Very Carefully. If you do not fill database details correctly, you will get error later on.
6. After that, you will be taken to the page to create an admin account. The username is admin by default, and can not be changed.
7. Upon creation, of the admin account all Databases will be created and now your site is ready to Use.
8. After the Installation is complete, You should delete the install directory from your server.

Basics of the Script

- You Can Submit Coupons via the yoursitename.com/submit.php page. After that the coupon will appear in the admin panel, from where you can verify it and approve it.
- The admin panel is located at yoursitename.com/admin/.
- Coupons can be added by any user and not just administrators. But, only admin can approve coupons.
- You can modify the navigation menu, sidebar, etc from the Admin Panel.
- You Can also Edit the Footer Text, add or remove links, etc from Footer. This can be done from the Admin Panel.
